

Agricultural production cooperative "Krasnorechensky"

Agricultural production cooperative "Krasnorechensky"

- Wheat is an important and most cultivated cereal in Europe;
- It is easily digestible for healthy dogs;
- Wheat is also rich in glutamine, an amino acid that is important for the health of the digestive system.

Glutamine is known to have a nutraceutical effect that improves the physiology of intestinal cells. It supports digestion and reduces the risk of digestive disorders in healthy dogs. It reduces the risk of pathogen translocation in the intestine and improves the immune response.
