

Lesozavodsky LPK

The company "LLPK" has been producing and selling furniture boards from different types of wood since 1999. The range includes only environmentally friendly furniture boards from Far Eastern species: Oak, Ash, Elm. You can buy them at our warehouse. Furniture boards are durable sheet material made of natural wood. They are made from separate boards (lamellas), they are glued together by width (in some cases, by length). We carefully process the wood before gluing - dry, trim, remove defects and splice. After that, high-strength and environmentally friendly glue is applied to the lamellas. This ensures the durability of the furniture board for the entire period of operation.

Solid-lamella furniture board — made from solid lamellas along the length. Furniture boards are glued only along the width.

Finger-jointed furniture board — lamellas of different lengths are used. First, they are joined along the length, using a tongue-and-groove joint. It is impregnated with an adhesive composition. The output is lamellas with a strong and durable connection. Then they are glued along the width.

List of Goods/Services with HS Codes:

4403110001 - coniferous logs, any degree of impregnation

4408908509 - veneer

Export Countries:

- China
