

LLC «DALSTAM-MARIN»

Dalstam-Marin LLC has established a workshop for growing aquatic organisms, where artificial spawning of oysters and trepang is carried out, which allows the young of these mollusks to grow to a commercial size.

Our farm offers educational excursions to sea gardens and the workshop laboratory, where you can see how sea mollusks are grown!

A cafe with a varied menu (seafood in any form) prepared from our grown products has been organized on the territory of the enterprise.

In 2018, a plant for processing mariculture products was launched.

The workshop fully complies with all state quality standards and is certified according to the HACCP system.

In the processing process, shock freezing technology is used, which allows preserving the gastronomic qualities of the finished product for a long time.

We have the ability, upon customer request, to process all types of fish, squid and other seafood.

We also offer storage services for fish products in a low-temperature warehouse.

A separate area of the enterprise is the production of dietary supplements, the main component of which is trepang.

Another separate area is the production and sale of cosmetics based on trepang (Day and night face cream with trepang extract; body cream for joints and muscles with trepang extract; foot cream with trepang extract).

Today, we work with a number of companies in the Moscow region, the Far East, other regions of Russia, and Asian countries.

03.21 Marine fish farming.

03.11 Marine fishing.
