

## LLC "DALSTAM-MARINE"

LLC "Dalstam-Marin" has been engaged in mariculture in Primorsky Krai for over 8 years.

The facility is located in Voevoda Bay, in an ecologically clean area of Russky Island, away from shipping routes. This allows us to preserve the natural taste and quality of the products.

The hydrobiont cultivation facility conducts artificial spawning of oysters and sea cucumbers, enabling the growth of juvenile mollusks to market size.

The farm offers educational tours to marine gardens and the facility's laboratory, where visitors can observe the cultivation of marine mollusks.

The enterprise features a café with a diverse menu (seafood in any form), prepared from the farm's products.

In 2018, a mariculture product processing plant was launched.

The facility fully complies with all state quality standards and is HACCP certified. The processing uses shock freezing technology, which preserves the gastronomic qualities of the finished products for an extended period.

LLC "Dalstam-Marin" can process all types of fish, squid, and other seafood upon customer request.

The company provides storage services for fish products in a low-temperature warehouse.

Another focus of the enterprise is the production of dietary supplements, with sea cucumber as the main component.

An additional line of business is the production and sale of cosmetic products based on sea cucumber (day and night face cream with sea cucumber extract; body cream for joints and muscles with sea cucumber extract; foot cream with sea cucumber extract).

The company works with several companies in the Moscow region, the Far East, other regions of Russia, and Asian countries. All products come with a full package of documents.
